

IN THE CLAIMS

1. (currently amended) A window assembly comprising a window frame for supporting a window, said window frame including, a jamb having an interior, defining a jamb pocket portion containing ~~a retractable mesh screen, disposed with~~ a roll screen cassette **including a retractable mesh screen having a leading edge and being**, and carried on a spring biased roller, and **said cassette being** contained within the **said** jamb pocket portion ~~integral with the jamb of the window assembly of the window frame~~, said jamb and said jamb pocket portion being an integral extruded **one piece** unit manufactured ~~by an extrusion process~~ when the jamb of the window frame is formed, said jamb pocket portion being defined by three sides of the interior of said jamb of the window frame, the mesh screen accumulating on and paying out from ~~the roll screen cassette, carried on the spring biased roller~~ **of the roll screen cassette**, disposed within said jamb pocket portion ~~of the jamb of said window frame~~, wherein **the roll screen cassette and** the mesh screen is **thereof are easily** readily accessible ~~from~~ **in** the jamb pocket for **simple removal and** replacement or maintenance purposes without ~~a~~ the need ~~to~~ of disassembling the jamb of **any portions of** the window frame, **the window assembly and adjacent parts of a building**.

2. (currently amended) The window assembly of claim 1 further comprising sill and header portions **including integral guides for tracking the leading edge of the mesh screen, said guides being formed when the sill and header portions are manufactured**, wherein **the leading edge of** said retractable **mesh** screen is guided in **the** guides provided with said sill and header portions of the window assembly **to and from an operative position**, ~~which allows for the manufacture of heavier screens in larger sections.~~

Claims 3 to 9 (cancelled)

10. (currently amended) The window assembly of claim 2 **wherein said guides** further comprising grooves disposed adjacent **in** the header and sill portions to receive an extension portion of a **an extended** handle **portion disposed at the leading edge** of the retractable **mesh** screen ~~also engaged with keyed edges of the screen and at the same time~~ **thereby** engaging the grooves to maintain the parallelism of top and bottom portions of the handle ~~when in motion~~ as

the mesh screen is payed out and accumulated to and from the operative position from the cassette contained in the jamb pocket provided in the jamb.

Claims 11 to 15 (cancelled)

16. (currently amended) A closure assembly comprising a closure frame for supporting a closure member, said frame including, a jamb having an interior, defining a jamb pocket portion containing a retractable mesh screen having a leading edge carried on a spring biased roller, ~~and contained within the jamb pocket portion integral with the jamb of the closure assembly of the closure frame,~~ said jamb and said jamb pocket portion being an integral extruded one piece unit manufactured ~~by an extrusion process~~ when the jamb of the closure frame is formed, said jamb pocket portion being defined by three sides of the interior of said jamb, the mesh screen accumulating on and paying out from the spring biased roller within said jamb pocket portion ~~of the jamb of said closure frame,~~ wherein the mesh screen is easily ~~readily~~ accessible ~~from~~ in the jamb pocket for simple removal and replacement or maintenance ~~purposes without the a need of to disassembling the jamb of the~~ any portions of the closure frame, the closure assembly, and any adjacent parts of a building. ~~frame.~~

17. (new) The closure assembly of claim 16 further comprising sill and header portions including integral guides for tracking the leading edge of the mesh screen, said guides being formed when the sill and header portions are manufactured, wherein the leading edge of said retractable mesh screen is guided in the guides provided with said sill and header portions of the closure assembly to and from an operative position.

18. (new) The closure assembly of claim 17 wherein said guides further comprise grooves disposed in the header and sill portions to receive an extension portion of an extended handle portion disposed at the leading edge of the retractable mesh screen thereby engaging the grooves to maintain the parallelism of top and bottom portions of the handle as the mesh screen is payed out and accumulated to and from the operative position from the jamb pocket provided in the jamb.
